Kit includes:

- Powerpack
- Element assembly

Easy installation

Pool Chlorinator

just chlor[®]

- * Easy to install
- * Safe - low voltage system
- * Low energy consumption
- * Saves time and money

- * Helps keep pool sparkling clear
- * Hygienic
- * Kills bacteria
- * 2 Year warranty

**Just add salt
for a sparkling
clear pool**

How does it work?

- Just-Chlor needs only 0.5% (5000 PPM) salt to produce sodium hypochlorite through electrolytic process. Salt levels are only approximately 12% of sea water. When your pool pump is running, water passes over the electrolytic cell and produces chlorine, which is pumped back into the pool.

Safe

- You no longer have to store dangerous chemicals.
- It is just like swimming in a giant teardrop, which is much healthier.
- No gas is generated when water flow stops (automatic cutout)

Economical

- Just-Chlor will save you a fortune in chlorine costs.

Healthy

- Many skin irritations are eliminated.
- No unpleasant chlorine odours or eye irritations.

Service

- We have more than 16 years combined experience in salt water chlorination and offer excellent backup service. Phone your nearest dealer and start benefiting immediately.

Automatic

- Just-Chlor is designed to automatically produce the required level of chlorine in your pool all year round running in conjunction with your filter.
- Maintaining the correct salt level is made simple with built in Salt monitor, indicating when salt should be added to the pool.

Convenient

- Keep your pH between 7.2 and 7.4 and Just-Chlor will do the rest.
- You can now go on holiday and not worry about your pool going green.
- The cell is easily cleaned.
- The see-through cell allows you to check if the unit is producing or whether it requires cleaning.
